Thanks Bruno! Perhaps I could modify it to throw in some Hume and Wittgenstein, mix it all up in a syntactic / semantic blender and REALLY confuse people. Word Games indeed. :-)

Or throw in stuff by whichever philosopher who wrote a book called "The Meaning of Meaning", to add some metaphoric recursion. And that what be one heck of a Frankensteinian (but only 1 part Wittgensteinian) Robo-philosopher.

Don't forget the famous American philosopher who contemplated the meaning of is.

Regards,
