good job!  
enjoy now!

2008/4/25 limodou <[limodou@xxxxxxxx](mailto:limodou@xxxxxxxx)>:

UliPad is a flexible editor, based on wxPython. It's has many features, just like: class browser, code auto-complete, html viewer, directory browser, wizard, etc. The main feature is the usage of mixin. This makes UliPad can be extended easily. So you can write your own mixin or plugin, or simple script, these can be easy and seamless integrated with UliPad.

New Features and Changes:

- #. Add php.acp thanks for O/ <[etggy@xxxxxxx](mailto:etggy@xxxxxxx)>
  - #. Replace old snippet with new snippet, more details please see <`Snippet Howto <[howto\\_snippet.htm](#)>`\_>
  - #. Binding F5 to editor but not MainFrame, and add F5(Refresh) support in Directory Browser.
  - #. Improve python class browser, threading update, change some icons
  - #. Add indent cursor move functionality see <`Indent Moving Howto <[howto\\_indent\\_moving.htm](#)>`\_>
  - #. Improve threading document modification process, so you can get better efficiency
  - #. Introduce meide(<http://code.google.com/p/meide>) project to simplify the interface creation
  - #. Add FNB.FNB\_DROPDOWN\_TABS\_LIST style to EditorCtrl
  - #. Change auto file check in Editor on\_set\_focus event handler
  - #. Change DDE to asyncore and asynchat framework
  - #. Change preference dialog from notebook to treebook
  - #. Add icon set theme support
  - #. Add strip line ending when saving functionality option in Preferences
  - #. Strip leading space when doing "Run in Shell"
  - #. Add auto detect python interpreter in windows platform
  - #. Improve ReST document render, and fix the setfocus lost bug when auto modified
- the html output, thanks a lot to ygao
- #. Change setmenutext to use fix width to set the menu text, replace with '\t'
  - #. Change notebook left double click to right double click(enlarge)

Re: [ulipad:2586] [ANN]UliPad 3.9 released!

notebook size)

- #. Add search text count in Find & Replace pane
- #. Add line ending mixture check when saving file feature
- #. Improve preference dialog input assistant checkbox process.  
When you check the first checkbox(Enable input assistant) it'll automatically toggle other 5 checkboxes.
- #. Change new toolbar button to dropdown toolbar button, and it can remember the last new file type(select new type menu first), then when you select new menu, it'll create a new file with the last new file type
- #. Improve command search and pairprog plugin caret display process
- #. Add auto new version of UliPad check
- #. Add slice language syntax support
- #. Add auto pop up project setting dialog when adding directory to directory browser window
- #. Add Open Explorer Window Here menu to editctrl tab context menu
- #. Add open snippet tool button, change open dirbrowser and open snippet toolbar button to check toolbar button
- #. Change ``explorer.exe %s`` as ``explorer.exe /e, %s`` in windows platform
- #. Add copy filename to clipboard menu on document area tab context menu
- #. Add wrap text feature, via [Edit]->[Format]->[Wrap Text...]

New Plugins:

- #. canvas\_test\_plugin, you can directly test DC api
- #. web2py\_plugin, supply web2py shell

Bug fix:

- #. Fix webopen twice open bug
- #. Fix editor shortcuts key caption error
- #. Fix if set DROP\_DOWN\_TABS\_LIST style, right arrow will disappear bug
- #. Fix utf-16 conversion bug
- #. Fix mako tag auto complete bug #issue 14
- #. Fix if lines are folded, when goto hiding lines will no effect bug
- #. Fix DDE bug, thanks to LP <liupengf12@xxxxxxxxxx>
- #. Fix webopen bug, can't correctly deal with 'mailto:'
- #. Fix smart tabs bug
- #. Fix copy and paste lineending is not correct bug
- #. Fix tab invisible bug after changing size or changing the page title
- #. Fix template line-ending not match the default line-ending setting
- #. Fix password widget is not Password type widget bug
- #. Fix script filename cannot be unicode(chinese) bug
- #. Fix syntax check exception process bug
- #. Fix ruler bug

UliPad has ported to code.google.com, so you can visit the new project site at: <http://code.google.com/p/ulipad>, and also visit the new svn address. Recommends using source version.
