Hi!

You can use Autoit.

Bad "conception" language ; but many good tools, for identify windows, process, send keystrokes, emulate mouse, etc.

(Autohotkey is make on Autoit 2 ; Autoit is actually in version 3).

Good trick : Autoit-X is a COM server, with the most importants functions of Autoit (nor GUI) ; and Autoit-X can be driven from Python+PyWin32.

sorry for my bad english

Michel Claveau
