```
from PIL import Image
import os
```

```
print os.path.exists('C:/Users/saftarn/Desktop/images/blob.jpg')
```

```
im2 = Image.open('C:/Users/saftarn/Desktop/images/blob.jpg')
im2.show()
```

first the command prompt pops up then the normal window to display pictures but it doesn't show a picture.

the print os.path.exists returns true and opening the file by clicking on it works. i've also tried gif-files with no success.

.
