hi all
sorry for multi posting, but:
is it possible to launch a tcl procedure (fire) containing tk command
from c.
here's a proc i would like to start:
```

```
proc fire {x} {
pack [label .l -text $x] -side top
}
```

```
when i try with Tcl_Eval, label is not recognize.
very very much thanks for any helps
```

Tcl_Eval is the correct thing. Before you execute Tcl_Eval, make sure that you have loaded the tk library.

Just run on the top of your C-Program something like

```
Tcl_Eval(interp, "package require Tk");
```
