I download a tkimg1.3_src from Internet, and built it under Windows XP. I got tkimgico13.dll, tkimgps13.dll, etc, and replaced them to /ActiveTcl/lib/Img1.3 one by one. I run the /ActiveTcl/demos/Img/demo.tcl to test them. When I tried the tkimgwindow13.dll, I met a error:"couldn't load library "E:/Developer/ActiveTcl/lib/Img1.3/tkimgwindow13.dll":this library or a dependent library could not be found in library path"

I'm very doubt, I'm sure I put the tkimgwindow13.dll in the right position. I built it with the same way like tkimgico13.dll & tkimgps13.dll, and the others are run well for Img/demos. Why the demos can't find the tkimgwindow13.dll?

Thank you for your help!
